DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Evaluations of level of ordinary skill in the art requires consideration of factors such as various prior art approaches employed, types of problems encountered in the art, rapidity with which innovations are made, sophistication of technology involved, educational background of those actively working in the field, commercial success, failure of others, and the inventor's educational level.

The "person having ordinary skill" in this art has the capability of understanding the scientific and engineering principles applicable to the claimed invention. The references of record in this case reasonably reflect this level of skill.

Claims 1-17are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Hsu et al. (5,847,246).

Hsu discloses a fluid heat transfer medium and process employing composite mixtures of monocyclic and bicyclic terpenes useful for heat transfer processes in a temperature range down to approximately –165 degree F., where the fluid heat transfer medium maintains its liquid phase (abstract). The reference teaches that the preferred

Application/Control Number: 09/613,209

Art Unit: 1751

mixture comprising the heat transfer fluid is a mixture comprised of at least one monocyclic terpene and at least one bicyclic terpene in which the mixture is comprised of about 10% to 90% by volume of the at least one monocyclic terpene and by about 90% to 10% by volume of the at least one bicyclic terpene(col. 3, lines 7-11). The second type of derivative adds an atom or functional group or another molecule to the terpene compound, for example: terpenes modified with silicon based compounds (col. 5, col. 44-49).

The reference anticipated or in the alternative, it would have been obvious to one of ordinary skill in the art at the time the invention was made, to create the instantly claimed heat transfer fluid, as it teaches the use of all the claimed terpens, which may be used with a terpenes modified with silicon based compounds, in their appropriate ranges.

The remaining references listed on forms 892 and 1449 have been reviewed by the examiner and are considered to be cumulative to or less material than the prior art references relied upon in the rejection above.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derrick G. Hamlin whose telephone number is (703) 305-0590. The examiner can normally be reached on Monday-Thursday and alternating Fridays from 7:30 AM - 4:00 PM.

If reasonable attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Yogendra Gupta, can be reached on (703) 308-4708. The fax phone number for this Group is (703) 305-3600.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0661.
